Architecture: AI-augmented tumor board case prep

1 Open the app and sign in. 2 Call the agents with the sign-in token. 3 Read the masked record and past cases by MCP. 4 Save run state and audit trail. 5 Fetch keys at start-up. 6 Model calls and guideline search. 7 Literature and trials.

Safeguards: names, record numbers and birth dates masked before any model call. Sign-in required on every request. A clinician approves before anything is saved. No write-back to patient records. Every step is logged.
